Here's a breakdown of the process:

- **Depressing the Clutch:** Fully depress the clutch pedal before shifting gears. This disengages the engine from the transmission, preventing damage.
- **Selecting the Gear:** Once the clutch is fully depressed, move the gear lever to the desired gear. Familiarize yourself with the gear pattern – typically, first gear is down and to the left, while reverse is often found by pressing a lever or button and moving the shift stick.
- **Releasing the Clutch:** Gradually release the clutch pedal while simultaneously increasing throttle input to maintain momentum. Smooth clutch release prevents jerky movements and stalling.

Practice is key to perfecting your *cambio de marchas Mazda 3*. Start in a safe, open area and practice smooth shifts at low speeds before gradually increasing speed.
