The manual itself is structured to guide users through the procedure of installation and usage, appealing to different stages of child development. The next sections delve into the elements of installation. The Century Smart Move XT is designed to accommodate rear-facing infants and front-facing toddlers and children. The manual provides detailed instructions, complete with illustrations, for both methods. It's imperative to pay close attention to these visuals, as they support the written descriptions. Furthermore, the manual will cover the modification of the harness and headrest. The Century Smart Move XT offers various adjustment options to accommodate your child's maturation and ensure a snug fit at all times. The harness should always sit at or below the child's upper body, and the headrest should be positioned correctly to guard the head and neck.
