A1: The recommended interval for transmission fluid changes varies slightly depending on driving conditions and usage. However, consulting your owner's manual is crucial. Generally, a change every 60,000 to 100,000 kilometers (or miles) is a good guideline. Using the correct type of transmission fluid specified in the manual is also vital. Using the wrong fluid can severely damage your transmission.

A2: Signs of a failing clutch can include slipping (engine revs increase without a corresponding increase in speed), difficulty engaging gears, a burning smell, and a spongy or hard clutch pedal. If you experience any of these symptoms, it's vital to have your clutch inspected by a mechanic immediately to prevent further damage.
