Understanding the Need for a Fordson Major Steering Rebuild

A sluggish, unresponsive, or noisy steering system on your Fordson Major significantly compromises safety and operational efficiency. Several signs indicate the need for a rebuild: excessive play in the steering wheel, difficulty turning, binding in the steering mechanism, unusual noises (clunking, grinding, or knocking) emanating from the steering column or linkage, and leaks from the steering gear itself. These issues can stem from worn components, such as worn steering box parts, damaged linkages, or seized bearings. Ignoring these problems can lead to more significant damage and potentially dangerous operating conditions. Proper
